

## KernelEvidence

target VC fingerprint  
kernel profile  
formula evidence + source bindings  
substitutions + binders  
provenance + availability  
final goal + polarity

*check*

## Minimal kernel (check)

do target bindings and provenance match?  
are substitutions valid?  
derive formulas and the SAT instance  
trusted SAT checker confirms UNSAT

**accepted**

**rejected**

*solver exit codes and backend traces are diagnostic only —  
hashes link evidence to its dependency slice*
